

Cornflour Slime

Need

- bowl
- cornflour made from corn (i.e. not wheaten cornflour)
- water (the amount of water required will depend on the amount of cornflour used)
- large spoon
- food colouring (optional)

Note: The amount of cornflour required will depend on how much slime you want to make. A 300 gram packet of cornflour will make about two metric cups of slime.

Method

1. Place the cornflour in the bowl.
2. Use the large spoon to stir the cornflour while adding the water a little at a time. Keep stirring and adding small amounts of water until all the cornflour is wet.
3. Add a few drops of food colouring to the mixture.
4. Keep adding small amounts of water and stirring until a thick slime forms.
5. Make a fist and punch the surface of the slime - the slime will feel hard.
6. Do the same thing, but very slowly—the slime will feel wet and runny.
